Appln. No. 10/717,903 Attorney Docket No. 059490-5025

IN THE CLAIMS

- 1. (currently amended): Method for treating and/or preventing diarrhoea in mammals or for preventing diarrhoea in young mammals normally subject to diarrhoea which comprises administering to the mammals an effective daily amount of a composition comprising, as active component(s) component, phytosterols and/or pentacyclotriterpenes as present in or derived from Shea oil.
- 2. (currently amended): Method according to Claim 1 wherein the mammals are weaning piglets or <u>weaning</u> babies.
- 3. (currently amended): Method according to Claim 1 wherein the phytosterols and/or pentacyclotriterpenes have the natural a composition of corresponding with the shea sterols or shea pentacyclotriterpenes as present in shea olein.
- 4. (original): Method according to Claim 3 wherein the shea sterols or pentacyclotriterpenes comprise more than 50 wt % of 4,4-dimethylsterols or 4,4-dimethyl pentacyclotriterpenes selected from the group consisting of alpha-amyrin, beta-amyrin, butyrospermol and lupeol.
- 5. (currently amended): Method according to Claim 1 wherein the phytosterols are the free hydroxysterols.
- 6. (original): Method according to Claim 1 wherein the effective amount is 0.005 to 5 grams/kg body weight of mammal per day.
- 7. (original): Method according to Claim 1 wherein the active phytosterols and/or pentacyclotriterpenes are administered as part of the food or feed for the mammal.
- 8. (original): Method according to Claim 7 wherein the food or the feed contains 0.001 to 85 wt% of the active component.

Appln. No. 10/717,903 Attorney Docket No. 059490-5025

- 9. (original): Method according to Claim 1, wherein the composition is selected from the group consisting of feed products, medicaments and dietary supplements.
- 10. (currently amended): Method for the preparation of a food or a feed product an animal feed having anti-diarrhoea or anti-scouring properties comprising earbohydrates and proteins wherein the food or feed product has anti-diarrhoea or anti-scouring properties by the incorporation of incorporating in an animal feed comprising carbohydrates and proteins an effective amount of phytosterols and/or pentacyclotriterpenes as present in or derived from Shea oil as active component sufficient to provide said properties in said animal feed.
- 11. (original): Method according to Claim 10 wherein the food product contains 0.001 to 50 wt% of the active component.
- 12. (currently amended): Method according to Claim 10 wherein the active components are the natural shea sterols, and/or pentacyclotriterpenes <u>as present in shea olein</u>.
- 13. (original): Method according to Claim 12 wherein the shea sterols and/or shea pentacyclotriterpenes comprise at least 50 wt % of 4,4-dimethyl derivatives of shea sterols and/or shea pentacyclotriterpenes selected from the group consisting of alphaamyrin, beta-amyrin, butyrospermol and lupeol.
- 14. (canceled)
- 15. (new): Method according to Claim 1 which the diarrhoea is caused by bacterial infection.
- 16. (new): The method of Claim 1 wherein the mammals are weaning mammals.
